Manufacturing Engineering & Consulting

Manufacturing IT Solutions

Genealogy and Build History Quick Reference Guide

Our Manufacturing IT Solutions offer off-the-shelf functionality designed to eliminate the typical challenges encountered in manufacturing. They are highly scalable and cost effective and can be seamlessly integrated into new or existing processes with great ease. Our Genealogy and Build History tools can help minimize the risks inherent with todays complex products and provide comprehensive containment in the case of a product recall.

Customer Challenges

- Complex Product and Processes
- High Product Variability
- High Risk Associated With Recalls
- Increased Compliance Requirements

The Technology

Dynamic Build History

Electronically record all activities and materials

Containment Reports

Accurately identify product lists from material batches

Material and Batch Scans

Confirm material compliance or record serial numbers

Zone Quality Check Function

Confirm material compliance or record serial numbers

Additional Resources

dsidsc.com/mits

"BOTTOM-LINE" RESULTS

- Reduced risk of exposure
- Better containment of issues
- Increased compliance
- Product build analysis
